

You may use and redistribute **OpenRat** if you accept the [GPL license](#).

The latest Version is available at dl.openrat.de.

Short installation instructions:

- Unpack the archive into the document root of your webserver
- Import the contents of file `create.sql` from the directory `doc/database/sql/mysql` into your database.
- Check database configuration in the file `config/database.ini.php`.

First login with "admin" and "admin". You must change the password at the first login.

Debian and Ubuntu

Openrat is available as a [Debian](#)-package. Insert the following line into the file `/etc/apt/sources.list`:

```
deb http://debian.openrat.de/latest ./
```

An `apt-get install openrat` does the install. Please check the database settings in file `database.ini.php`.
