

What brings OpenRat to you:

- **OS- and browser-independent.** OpenRat is usable with any browser - without JavaScript.
- **Administration and Management of your values from any place.** The Author only needs a webbrowser.
- Integrated **User-, group- and rightsmanagement.**
- All objects of a projects are stored in a tree-based explorer-like view.
- LDAP-Support, user passwords are checked against a LDAP-Server.
- Strict **frontier between live and CMS-server.** OpenRat generates only static pages and makes **optimal performance** possible on your live server.
- Pages are generated into the server filesystem or via FTP-Transfer to your webserver.
- Text-markup is done via [Wiki-Syntax](#) or the [FCKEditor](#).
- Data is stored into a SQL-database, support available for PostgreSQL and MySQL.
- **Page preview** as WYSISWYG.
- Management of all **media files.** The author is able to upload, replace, copy, move and rename objects.
- **Versioning system**, the author is able to re-use values out of a history.
- Support for multi-language Webpages.
- Executing of PHP-Code while generating the pages - a solution for complex menu structures.
- Generating **multiple project models.**
- The most important thing: OpenRat ist free software.

What OpenRat NOT is:

- OpenRat is no portal system. because of the frontier between CMS- and liveserver, no dynamic content like guestbooks or discussion forum are possible.
